## Astilbe False Spirea

Spikes of graceful plumes, mostly erect but some arching types. Foliage varies from shiny light green to remarkably dark. Taller varieties can be used for cut flowers. Most Astilbes prefers a rich, moist soil in a semi-shade location. If grown in full sun, give them plenty of water, especially at bloom time.

All are listed under color headings to aid you in choosing varieties that fill your design needs. The astilbe bloom season extends from early to late summer. Therefore, the varieties marked with an "E" will bloom in approximately the first third of that period, those marked with an "M" in the second third, and those marked with an "L" in the last third. Sometimes there is an overlap between bloom times and that is indicated by "M – L" for mid to late season.

## Grasses

Native grasses provide the perfect complement to dry, prairie-like settings. Hybridized grasses work beautifully in landscaping and gardens. Foliage color ranges from green to variegated to blood red. From stunning vertical accents to low pin cushion-like varieties, these have become the newest landscape rage. Generally, most prefer sun. A light mulching in the fall is beneficial. Good drainage is essential for most varieties.

**Helleborus Hellebore**

Winter and very early spring blooming plants. Great for the shady border or light woodlands. Helleborus is one of the most enchanting spring bloomers. The plant is not difficult to grow, but does require some attention. Helleborus mainly grow in the spring and fall. Due to the heat, these plants hardly grow in the summer. The evergreen varieties should be protected against the harsh winter winds.

## Hemerocallis Daylilies

The combination of easy maintenance, hardiness and flower color makes this a "perennial" favorite among gardeners and landscapers alike. Hemerocallis prefer full sun but will grow in half shade. Most daylilies grow to a clump size of 18-24" across.

### Hosta

Low maintenance and bold foliage help make this the perfect shade and part shade perennial. Variegated types are better for shady areas, while green and yellow types can withstand more sun. Blue varieties usually have thicker substance and keep their color best in full shade.

Low maintenance and bold foliage help make this the perfect shade and part shade perennial. Variegated types are better for shady areas, while green and yellow types can withstand more sun. Blue varieties usually have thicker substance and keep their color best in full shade.

The table shown on these two pages is a quick reference that categorizes the Hostas available at Shady Acres by leaf color and mature foliage clump size.

## Herbs

The popularity of herbs continues, undoubtedly due to the onslaught of cooking and gardening television programs utilizing them in numerous ways. Herbs are used for culinary, medicinal, and ornamental purposes. The majority of the herbs we grow are for cooking, yet we offer some that are useful in decorating the home and garden. There are other "herbs" listed under our general perennial line.

## 2008 Shady Acres "Golden Anniversary" Top 10 List

Selections made by the Garden Center Staff at Shady Acres

1. ***Carex elata* 'Bowles Golden' – (Gold Sedge)** - Gold Sedge grows in shady, moist to wet conditions. The bright golden foliage makes a great addition to shady corners. It wins a gold medal for popularity with our customers.
2. ***Coreopsis verticillata* 'Golden Shower'** - "Golden showers" sounds more lucrative than "pennies from heaven", and in the garden, this type of *Coreopsis* is worth its weight in gold. The bright yellow flowers shimmer against the dark green, finely cut foliage. Its long season of bloom makes it a good investment for the garden.
3. ***Dianthus caryophyllus* 'Golden Sun'** – On the horizon of underutilized perennials is *Dianthus* 'Golden Sun'. Its day will dawn when its virtues are discovered by gardeners searching for a fragrant, yellow cut flower to add to their garden universe.
4. **Golden Oregano** – This herb, *Origanum vulgare aureum*, earns a gold star for being useful not only in the kitchen but the ornamental garden, too! It adds flavor to Italian dishes and spices up the ornamental perennial border.
5. ***Hosta* 'Gold Standard'** – Just like Shady Acres, *Hosta* 'Gold Standard' has withstood the test of time. *Hosta* 'Gold Standard' has set the criterion its *Hosta* peers attempt to achieve...quite similar to Shady Acres and the nursery industry. They're both "oldies but goodies".
6. ***Hosta* 'Golden Tiara'** – *Hosta* 'Golden Tiara' is prized for its green foliage edged with chartreuse. Its overall performance in the garden is a crowning achievement...just like celebrating 50 years in business.
7. ***Humulus lupulus* 'Aureus' (Golden Hops)** Twining vine with chartreuse leaves. Pale green, papery overlapping bracts cover cone-like fruiting structures. Great for quickly covering fences.

8. ***Lamium* 'Golden Anniversary'** – In the world of groundcovers, this *Lamium* deserves to be celebrated. The fantastic foliage has a broad gold margin with a narrow silver accent stripe. Not only is it festive in the landscape but in container gardens, too!
9. ***Paeonia* 'Honey Gold' – (Honey Gold Peony)** Peonies have graced landscapes for years and years. Their longevity and majestic blooms maintain their popularity with gardeners. *P.* 'Honey Gold', with its creamy white blooms and pale yellow centers, makes a sweet addition to the perennial garden.
10. ***Solidago* 'Golden Baby' – (Golden Baby Goldenrod)** Not a contributor to hay fever so it won't make you whine and cry, this *Solidago* is a compact grower with dense, small golden-yellow blooms. This late blooming "Baby" tolerates dry conditions once established.

## ***Shady Acres Perennial Planting Instructions***

Due to the differing nature of soil conditions, moisture, and exposure in our area, the following planting instructions are suggestions for successful perennial establishment.

1. **Soil Preparation:** Prepare the soil by mixing 2-3" of compost with the existing soil in the area to be planted. At Shady Acres, mushroom compost and cotton burr compost are available for purchase.
2. **Planting:** Dig the hole twice the size of the pot but no deeper. Carefully remove the plant from the pot. Place the plant into the hole making sure it is at the same depth that it was in the pot. Backfill with the prepared soil. Lightly pack the soil around the root ball leveling off the soil around the plant.
3. **Water:** Following planting, water the plants thoroughly. Be sure the root area of each plant receives ample water. (A root stimulator may be applied. Follow directions on product label.) As the plants become established, water as needed. Weather will determine how often to water. Warm, windy day may require daily watering, while under other conditions water may not be necessary for two days or longer. Check to see if plants need water by sticking a finger into the surrounding soil. If the top 1-2" of soil is dry, watering is recommended.
4. **Mulch:** Apply 1-2" of mulch to the newly planted garden. Keep the mulch away from the crown of the plant to reduce the risk of rot. Cocoa bean shells, pine needles, or a light layer of compost can be used as mulch and are available at Shady Acres.

We hope that this information helps in your gardening experience.

## **Garden Shop**

Whether you're looking for just the right accent for your garden, comfortable gloves and tools, or useful plant care products, we have them in our quaint garden shop. ## ***Bulbs***

We offer a nice selection of spring blooming bulbs in fall. Place your orders at Shady Acres in spring for fall shipment. Bulb information and order forms are available upon request.

### ***Important Basics for Success with Bulbs***

#### **Soil**

Most bulbs adapt to many types of soil, but nearly all prefer a loose, well-drained soil structure. Before planting prepare the soil by working the top 1 to 1.5 feet so that roots can grow easily and water will drain through quickly. Heavy soils and extremely sandy soils can be improved by adding organic materials.

#### **Planting time**

Bulbs can be planted until the ground freezes. In northern zones, this usually means sometime between late November and mid December. Do not allow bulbs to freeze in storage. Bulbs must be planted in fall and not held until spring.

#### **Fertilizing**

Correct fertilization encourages bulb quality and their ability to perennialize. Loosen the soil and mix Bulb Booster fertilizer in with the soil at the time of planting. Do not apply fertilizer directly to the bulb.

#### **Watering**

Water thoroughly after planting. During active growth, bulbs need regular watering. Bulb roots grow deep, so watering should be thorough, not just a surface sprinkling.

#### **Mulching**

Mulching with organic material helps bulbs in several ways. It helps to minimize temperature fluctuations and to maintain an optimal moisture level in the bed. It also helps discourage weed growth.

#### **After care**

After the flowers fade, remove the dead head or seedpod to keep it from forming seeds. This does not harm the bulbs, but channels energy into the bulb instead of seed production. The leaves must be allowed to remain green and alive long enough to store energy for next year's flowers. It's best to let the foliage remain until it has turned yellow.
