Astilbe False Spirea

Spikes of graceful plumes, mostly erect but some arching types. Foliage varies from shiny light green to remarkably dark. Taller varieties can be used for cut flowers. Most Astilbes prefers a rich, moist soil in a semi-shade location. If grown in full sun, give them plenty of water, especially at bloom time.

The Astilbe bloom season extends from early to late summer. Therefore, the varieties marked with an "E" will bloom in approximately the first third of that period, those marked with an "M" in the second third, and those marked with an "L" in the last third. Sometimes there is an overlap between bloom times and that is indicated by "M – L" for mid to late season.

Helleborus Hellebore (Lenten Rose)

Winter and very early spring blooming plants. Great for the shady border or light woodlands. Helleborus is one of the most enchanting spring bloomers. The plant is not difficult to grow, but does require some attention. Helleborus mainly grow in the spring and fall. Due to the heat, these plants hardly grow in the summer. These plants should be protected against the harsh winter winds. Deer resistant.

Grasses

Native grasses provide the perfect complement to dry, prairie-like settings. Hybridized grasses work beautifully in landscaping and gardens. Foliage color ranges from green to variegated to blood red. From stunning vertical accents to low pin cushion-like varieties, these grasses have become the newest landscape rage. Generally, most prefer sun. Good drainage is essential for most varieties.
